

Whats wrong with them telling me what the traffic and weather is? I mean if a local channel can do it and cable tv, and broadcast tv can do it why can't xm? Its a public service. I travel alot and the traffic and weather helps me out a bunch. I do not know the local channels of the different areas with xm i do not have to worry about driving and searching for a station to get a traffic and weather report i just push a button and i get it. They give much better detail and up to the minute reports unlike local stations. If xm can't give the reports then no one should be allowed to give the reports. I mean hell whats next are they gonna limit the type of music we they can play?
